¡GET TO KNOW ABOUT US!

WE ARE THE ONLY COMPANY IN MEXICO THAT MANUFACTURES ALL BOARDS CATEGORIES IN A SAME PLACE

The spaces in which coexistence, work, entertainment, rest, and daily life occur are intended to offer specific functionalities. Therefore, their design must respond to needs that are easy to solve using the most suitable materials.

The multiple virtues of wood, such as its comfort, beauty, and ease of work, make it a material that has remained present in the design and construction of spaces and furniture. Thanks to current technology, Duraplay wooden boards have incorporated all these qualities, taking advantage of the forest resource in a sustainable way to create special products that provide solutions for large surfaces with a great homogeneity, stability, and diversity of finishes that increase the possibilities of usage.

Focused on offering the widest range of boards that complement each other, differentiated by their consistent quality, and dimension and finish options, Duraplay invites you to take a look at its portfolio of solutions, among which you will discover the ideal material to make your project happen.

A composite panel

For You

Each furniture, interior architecture, and even a construction project has its own complexity and requires planning and efficiency of materials, resources, and costs.

Starting by defining the materials that best adapt technically to the project requirements. If it needs to obtain support and resistance to weight, if it requires the incorporation of details that increase the complexity of the design, if it will be located in humid areas, or if it requires the assembly of highly reliable structure and supports, these are factors that determine the choice of a substrate.

While the functionality for which each project is destined will lead us to choose materials that allow attractive and practical finishes, or natural wood finishes that increase the value of a space; or solutions that facilitate the organization and economy of furniture, whatever the case, we will find an ideal coating to make it possible.

No matter the current need, find the ideal composite wood panel and make your project happen with Duraplay.

Landscaping Studs

Medium density fibreboard made with 100% ponderosa pine wood, combined with adhesive resins through high pressure and temperature process, which results in a board with properties high physical-mechanical and low abrasiveness.

ATTRIBUTES:

- Versatile.
- Easy to cut.
- Excellent for painting and lacquering.
- Ideal for routing, milling, turning, and grooving.
- Suitable for coating with melamine, easy, veneer, high-pressure laminate, vinyl, PVC, membrane pressing, among others.

COMMON USES:

- Furniture fronts.
- Curved moldings and finishes.
- Router, laser, milling, and CNC cutting.
- To be laminated with vinyl, PVC, membrane pressing, powder paint, high gloss, and high or low-pressure laminate.

Fibra**play** MDF CNC DOORS

Composite wood panel by 100% ponderosa pine wood particles, which are pressed with resins at high temperatures, resulting in a durable, resistant board with an ideal surface to be laminated.

ATTRIBUTES:

- Good performance in weight load.
- Better grip on the screw.
- Good behavior at machining (grooving, cutting, punching, etc.).
- Homogeneous surface, ideal for covering with melamine, foil, sheet metal, and high-pressure laminate.

COMMON USES:

- Furniture structures.
- Backs and funds.
- Shelves.
- Straight surfaces in office and residential furniture.
- Stair Treads
- To be laminated by low or high-pressure sheets, vinyl, PVC, among others.

Duraplay
PARTICLEBOARD
ALDER VENEER

Duramel Sense is a thermally fused laminated panel product line offering various decorative paper designs and textures.

Made with DURAPLAY panels (PB / MDF) are ideal for creating furniture or interior architecture projects.

ATTRIBUTES:

- Decorative and versatile.
- Ready to assemble.
- Facilitates serial production.
- Increases the profitability of the project.
- Allows you to design high-impact environments.

COMMON USES:

- Manufacture of furniture for frequent use environments.
- Surfaces that could be in contact with liquids.
- Wallcovering.
- High visual impact environments.

Plywood

STRUCTURE AND SUPPORT

This material is composed of layers of 100% ponderosa pine wood thin sheets. Plywood by Duraplay offers a range of interior and exterior face grade sanded panels for diverse applications.

ATTRIBUTES:

- Durability and Support.
- Structural use in construction, furniture and packaging.
- Variety of specialized products for interior and exterior use, according to the constitution and resins used.

INTERIOR PLYWOOD BD

Plywood

STRUCTURE AND SUPPORT

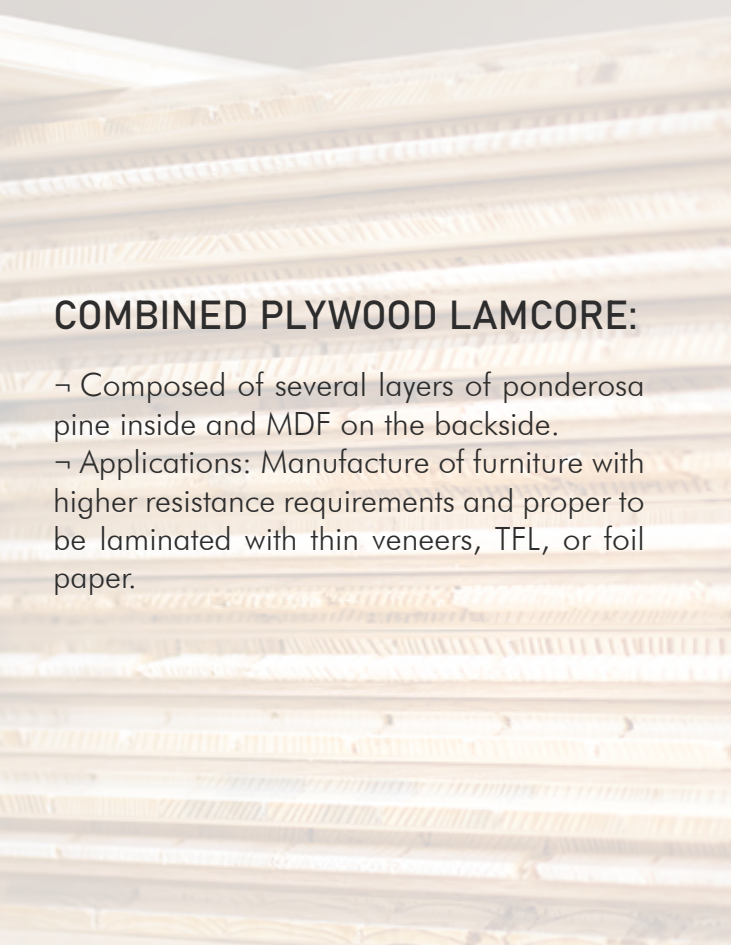

INTERIOR PLYWOOD:

- Composed of urea-formaldehyde resin and 100% ponderosa pine wood.
- Applications: Manufacture of furniture, structures, wood finishes, door panels.

COMBINED PLYWOOD LAMCORE:

- Composed of several layers of ponderosa pine inside and MDF on the backside.
- Applications: Manufacture of furniture with higher resistance requirements and proper to be laminated with thin veneers, TFL, or foil paper.

Duralam is a panel laminated with decorative foil paper. It is proper for indoor use in economical and assembled furniture applications.

ATTRIBUTES:

- Ideal for vertical surfaces.
- Excellent for low traffic furniture and dry environments.
- Compliment for furniture backs and drawer bottoms.

COMMON USES:

- Decoration of spaces.
- Furniture ready to assemble.

Duralam
FOIL
WHITE

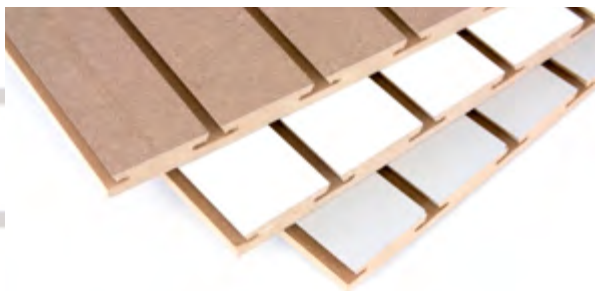

It is a fiberboard laminated with a decorative TFL into which several slots are made throughout the piece.

ATTRIBUTES:

→ Ideal for decorating, organizing home and commercial spaces, making them more efficient.

COMMON USES:

- Exhibitors in commercial spaces.
- Organizational walls in workshops and work areas.
- Decorative walls at home.

Square board made of 100% ponderosa pine wood, available in rounded or smooth edge versions.

ATTRIBUTES:

- Suitable for indoor and outdoor use.
- Construction process applications.
- Packing.
- Furniture and decorative environments.
- Rustic finishes.
